ComicCraft– AI Comic Story Creator using Gemini Models

An AI-powered platform for turning ideasintoillustratedcomic stories

Project Overview

•ComicCrafthelps users create comic stories from a simple story idea or prompt.

•Gemini models can support story generation, multimodal understanding and visual creation.

MainGoal

•Make comic creation faster and easier for students, creators and beginners.

Problem Statement

Traditional comic creation can require multiple creative and technical skills

Challenges

•Writing a complete story, dialogue and scene descriptions takes time.

•Creating consistent characters and scenes manually can be difficult. •Users may need separate tools for writing, artwork and comic layout.

Need

•A single AI-assisted workflow that connects story ideas with visual comic panels.

Proposed Solution

ComicCraft combines AI story planning with comic-oriented visual generation

Story Generation

- Gemini generates the plot, characters, scenes and dialogue from the user's idea.

Visual Creation

- Gemini image-generation capabilities can create comic artwork from scene descriptions.
- Gemini's image models support text-to-image and image-based creative workflows:cite turn0search1 Comic Assembly
- Generated scenes can be organized into panels with captions and speech bubbles.
